Abstract. The professional training goal of creative, active citizens in the current society requires the development of important cognitive abilities from the higher education program, such as the formation, development of students' views, ideas, their clear expression, self-confidence, good organization and the establishment of facts and evidence. However, these qualities are not enough to form a full-fledged, educated, developed citizen. As a respected, honorable citizen is not only the one who obeys the rule of law and lives peacefully, but also the one who recognizes the changes in time, able to make decisions regarding their behavior in specific circumstances and situations.

Keywords: quality of higher education; formation of responsibility; socialization; factors of training effectiveness; the teacher's role.
