Abstract. The authors consider the development trends of psychological science in Mongolia, based on the leading role of this science in modern society, in order to harmoniously develop the Mongolian society. In this article, the authors analyse how psychological science has developed in Mongolia, beginning from the mid-twentieth century; the directions of its development are outlined. As a stage of evolution, the "Social Work Program", accepted in 1997, is considered and its impact on the development of society is presented. Further, the authors formulate successful modern trends of psychological science development in Mongolia and summarize the progress that has been made in its development. In conclusion, the authors formulate the most promising ways of its development in the future, based on the study of evolution and the current state of psychological science development in Mongolia.

Keywords: Development of society; Comprehensive program; Psychological sciences; Human factors; Features of Mongolia.
