STATE POLICY PERSPECTIVE DIRECTIONS OF LABOR MARKET REGULATION

Anastasiya Lyashko

Student in Ural State University of Economics

Yekaterinburg, Russia

Abstract. The article is devoted to the analysis of the state policy perspective directions on the labor market in Russia. The purpose of this article is to comprehend under what conditions the program for the creation and modernization in Russia of high-performance jobs by 2020 can be performed. The author has revealed that the number of economically active population of the country by this period will decrease, a number of professions will not be claimed, which is negatively perceived by the population. It is forecasted an increase in the labor deficit, as well as the imbalance in the supply and demand for labor, according to qualification and territorial features. By the author's opinion, the increase in flexible employment is one of the main promising directions for the formation of the modern labor market in Russia. It was concluded that it is necessary to attract targeted personnel to the most important sectors through professional orientation, including through trade union forces.

Keywords: work; labor market; public policy; regulation of employment; development.
