

PROSPECTS OF ECONOMIC SCIENCES ABOUT HUMAN RESOURCES

Koulkova Inna

Doctor of Economics, Professor in The Ural State University of Economics

Yekaterinburg, Russia

Abstract. This paper provides a discussion and contains the author's vision of the future of the economic sciences about human resources. The author conducted a study of the contents of a passports of scientific specialties for the group «economic science», and identified issues relating to human resources studying and/or management in all sections. Further in this article the author has identified six levels of human resource management and suggested promising research directions for each of them. There was revealed one factor - the development of IT-technologies, which has an impact on the change research at all levels of management. The conclusion about the importance of studying human resources management at the individual level in domestic science was made.

Keywords: economic sciences; human resources; development prospects, the development of science; scientific specialty; levels of management.
