Abstract. In the article considered unevenness of allocation of labour resources. A quantitative analysis is conducted of dynamics of managing subjects, forming demand on labour in economic space. The quantitative analysis of dynamics of managing subjects was conducted on three directions: on the patterns of ownership of managing subjects, on the types of economic activity, on municipal formations of republic of Buryatia, as an object of economic space. An analysis is conducted busy in an economy and average annual quantity of workers of enterprises of organizations. Analysis busy in an economy conducted on the patterns of ownership of managing subjects, types of economic activity. The analysis of average annual quantity of workers was conducted on municipal educations. Elasticity of employment is expected on the types of economic activity and municipal educations. 6 groups of municipal educations are distinguished on the level of elasticity of employment.

Keywords: spatial distribution; economic resources; municipal educations; competitiveness of region; enterprises; labor market; competitiveness of labour resources; interregional variation.

JEL codes: J21; O18.
